

## DETECTED ISSUES ON APP

### Issue Nr 1. No error message present when image is larger than requested

1. Start with an item creation
2. Attach an image larger than 320x320 pixels
3. Complete the requested fields and proceed to create.

#### **Expected behavior:**

An error informs the user that it is not possible to create the item since the attached image is larger than the requested pixels.

#### **Current behavior:**

Even though the item cannot be created, there is no error present to inform the user the reasons and what needs to be fixed in order to do so.

### Issue Nr. 2 Edit / Delete buttons disappear from the item box if text is larger than a certain amount of characters.

1. Start with an item creation
2. Attach an image
3. Complete the text box and add more than 200 characters.
4. Finish creation

#### **Expected behavior:**

Text on the item box must re-format in order to avoid the disappearance of Edit/Delete buttons. Everything must be seen as normal.

#### **Current behavior:**

A large amount of characters make the buttons disappear and the user is not able to Edit or Delete the item.

### Issue Nr 3 Image is not being updated when an item is edited.

1. Proceed with an item edition.
2. Change the selected image for a new one
3. Change the text on the box.
4. Confirm changes.

#### **Expected behavior:**

The image and text are both updated with changes made by the user.

#### **Current behavior:**

Text gets updated but the image remains the same even after refreshing the page.

#### **Issue Nr 4 No item creation confirmation**

1. Start with an item creation
2. Fill al the mandatory fields
3. Finish the process

#### **Expected behavior (desirable):**

A message informs the user that the item has been created or the page positions the user on the recently created item.

#### **Current behavior:**

There is no message that informs the user of the item creation so the task is for the user to scroll down the page and check for itself.
